## WHAT MAKES AMEN CLINICS DIFFERENT

Improving the health of your brain and your quality of life is our primary goal, and it all starts with learning how your brain functions. Why? Your brain controls everything in your life—from motivation to healthy relationships to stress resilience—when your brain works right, you work right too!

After 25-years, we have published outcomes that demonstrate the Amen Clinics Method has high levels of success, even for complex cases. **On average, our patients have received 4.2 diagnoses, have failed 3.3 professionals and 4 to 6 medications before coming to see us.**

We are very proud of what we do and how we do it—because it works for a high percentage of people. In our outcome study, we showed that **85% of Amen Clinics' patients experience improved quality of life after just 6 months of treatment.** This positive outcome data is better than any other published study that we are aware of.

Using detailed clinical histories where we obtain biological, psychological, social, and spiritual information, plus brain SPECT imaging, we are able to target treatment specifically to your concerns and how your specific brain functions. We take the time to create an individualized, targeted treatment plan just for you, beginning with natural treatments whenever possible.

At the Amen Clinics, we are dedicated to helping you have a better brain and a better life.

The **San Francisco Bay Area** is home to the very first Amen Clinic, which opened its doors in 1989. Located just 9 miles south of Central San Francisco, this clinic is a great choice for people living in Southern Oregon down to Monterey, California, East to Nevada and all over the world.
